- ▶脚本用户组管理

・脚本 API

- ➤import pyjdbg 封装 sid及log数据结构, 提供获取数据接口
- ▶import skulnfoClient 封装sku info数据结构, 提供根据skuid解析接口
- ➤综合示例:根据cid过滤Mining-sku信息.py

・脚本 API – pyjdbg – 封装类型

```
class SidInfo - (sid, user pin, req time, svc list)
SidInfo · Functions:
····getSid()···········获取sid·str·(return·str)
····getUserpin()·····--获取user pin·(return·str)
····getRequestTime()··-·获取request·time·(return·str)
····getServerList()···-·获取sid·的server·list·列表·(return·list)
····printInfo()······-·打印Sid·详细信息:·sid,·user_pin,·request·time,·server·list.
                       class ServerInfo - (name, ip, port, instance id, attrs, mod ver, kvdict)
ServerInfo Functions:
····getName()···········-·获取·server·的·name·(return·str)
····getIpport()······-·获取·server·的·ip:port·(return·str)
····getAttrs()············获取·server·的·attributes·(return·str)
····getInstanceId()···-·获取·server·的·instance id·(return·str)
|-···getModversion()···-·获取·server·的·mod ver·(return·str)
····getKVDict() >·····-·获取·server·的·kv字典·(return·dict)
|-···getKeys()······-·获取·server·的·keys···(return·list)
|····getValue(key)····--·获取·server·对应key·的·value·(return·json)
|----printInfo()------打印-Server-详细信息:-name,-ip:port,-instance id,-mod version,-kv-dict.
```

・脚本 API – pyjdbg – 对外方法

```
pyjdbg.getSidinfoList()··-·获取·sidinfo·list·(return·list)
pyjdbq.qetParamList()····-·获取·选择keys值对应的·list·(return·list)
pyjdbg.getFirstSid()·····-·获取·first·sid·对应·的·SidInfo·对象·(return·SidInfo·obj)
pyjdbq.qetDiffSid()······-·获取·diff·sid·对应·的·SidInfo·对象·(return··SidInfo·obj·or·None)
pyjdbg.printAllSidInfo().-.打印.First和Diff.SID.log详细信息
pyjdbg.getAllKVDict()····-·获取·((sid, server name index, key),·value)·对应的字典·(return·dict)
pyjdbg.getValue(sid, server index, key) - · 获取 (sid + server index + key) · 对应的value · 字符串 ·
                                                                                (return · json)
      for i, sidinfo in enumerate(pyjdbg.getSidinfoList()):
  1
                                                              示例: 打印sid及内部server信息.py
          print('>>>>>sid[%d]' % i)
          print('[sid] %s' % (sidinfo.getSid()))
          print('[user pin] %s' % (sidinfo.getUserpin()))
   4
          print('[req_time] %s' % (sidinfo.getRequestTime()))
          print('>>>>>>>serverlist detail')
          for j,svc in enumerate(sidinfo.getServerList()):
  8
             print('[%d - server name] %s [ %s ]' % (j, svc.getName(), svc.getIpport()))
             print('[%d - server keys] %s ' % (j, svc.getKeys()))
 10
 11
             i = i+1
 12
          print
```

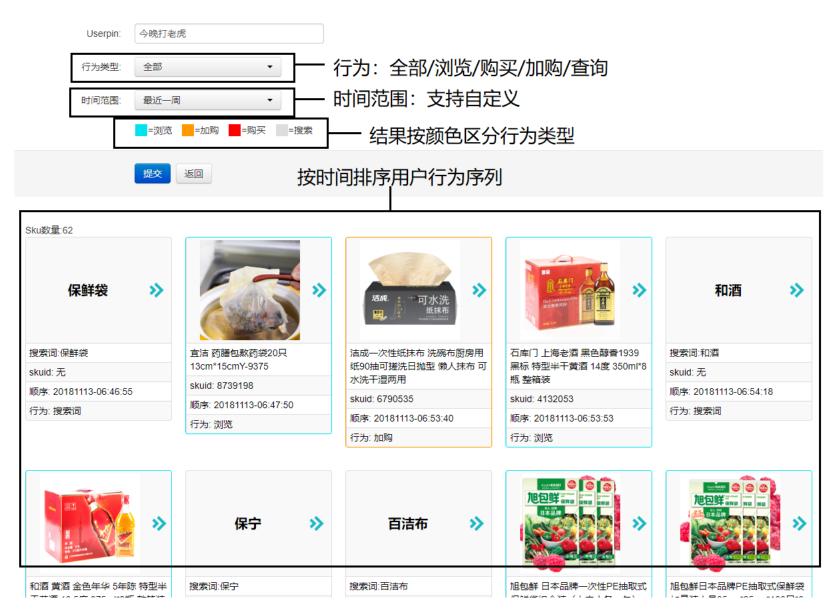

・脚本 API - skuInfoClient - 封装类型
